

Tool Trolley 13217.

Leading-edge tools. Safe, sturdy storage.

Special requirements.

Special solutions.

Ever since its founding 150 years ago, STAHLWILLE has been a byword for quality in the development and manufacture of professional tools. As a high-performance technology partner to the aerospace industry with many years' experience, we develop and supply individually conceived tool solutions that meet the most stringent safety and quality standards.

To ensure that these high demands are met, we have developed the extremely sturdy, resilient Tool Trolley 13217. Designed specifically for mobile use, this system is far lighter in comparison with competing products, while offering considerably more storage capacity.

Together with specially hand-picked sets of tools, this tool trolley offers individual solutions in which no tool is superfluous, no storage space wasted and there is no unnecessary weight to be transported. For greater convenience, faster work processes and versatility in maintenance, repair and overhaul – not just in aerospace.

Tool Trolley 13217.

The systematic approach.

Even the basic version of the extremely sturdy, resilient **STAHLWILLE Tool Trolley 13217** includes a range of sophisticated details for intelligent tool storage and control. For example, the drawers can be completely removed, closed with a transparent lid and used as separate, independent, mobile tool storage solutions. The extendible telescopic handle, in conjunction with the smooth-running castors, allows the trolley to be transported and manoeuvred extremely easily and flexibly.

To ensure the best possible protection for the tools, the trolleys are provided with specially developed napped foam in the lid to complement the particularly safe, easy-to-monitor inlays used for the Tool Control System.

1

Smart design. Concealed under the lid are a removable tray with handles and two transparent drawer covers.

2

Mobile. Attaching the covers to the drawers allows them to be used flexibly as separate tool boxes.

3

Safe. Tools are held securely in place by the napped foam inside the lid of the case.

4

Versatile. Easily removable drawers with endstops and three different drawer heights. Drawers can be inserted in any order.

5

Ergonomically designed. Two sturdy carrying handles at the sides.

6

Individual. The tool case and drawers can be individually labelled.

7

Practical. With one top cover and one removable front cover.

Conveniently mobile – each of the drawers can be turned into a mobile carry-box by attaching one of the transparent lids.

More highlights

- Extendible telescopic handle facilitates transport.
- Two smooth-running twin castors on the telescopic-handle side.
- Adaptable for upright transport using 4 castors, R 13217 Set of castors (please order separately).
- Resistant to Skydrol, acetone, kerosene and hydraulic fluids.
- Carrying capacity 60 kg.
- Three locking positions with padlock.

Accessories for 13217.

Even more choice.

Optional additions, such as the set of wheels to provide better mobility on four wheels, the transparent cover that offers more storage space and additional drawers make the 13217 even easier to personalise.

R13217 Set of wheels

Code 96 89 48 05

- Easier, more mobile deployment.
- For upright transport on four wheels.
- Set consisting of four swivelling castors, two of which with parking brakes.

13217 TA Transparent cover

Code 89 01 01 00

- All present and correct – a glance through the transparent cover is enough.
- Provides additional storage space for documents, for example.
- Made of sturdy, scratch-resistant plastic.
- Robust construction with metal hinges.

TR-SCH Drawer

- Practical drawers with three different heights to make individual storage easier.
- Made of resilient plastic to keep weight down.
- Colour: jet black.

Sets of tools for 13217.

For all requirements.

STAHLWILLE's Tool Trolley 13217 is available with specially selected sets of tools to ensure efficient, fast, reliable MRO. Our **High Performance Quality (HPQ®)** tools are developed and manufactured in Germany. They combine the tightest manufacturing tolerances with the greatest possible force transmission and durability. Storing the tools in STAHLWILLE's Tool Control System (TCS) combines the highest levels of safety and efficiency with the reassuring feeling that none of the tools has been left in a place that could, at some point in the future, become a safety risk.

Every tool has its clearly defined space. At a glance, you can see where each tool belongs, saving you time and, as a result, money.

The push-out recesses facilitate tool removal and promote faster, more efficient working.

Thanks to the noticeable yellow background, a quick glance at the tray shows instantly if everything is where it should be. If you can see yellow - there is something missing.

Our tool solutions.

As individual as your needs.

In work environments where processes are tightly integrated and deadlines are even tighter, it is crucial that every tool has its own place and everything is where you expect to find it. STAHLWILLE's Tool Control System (TCS) combines the highest levels of safety and efficiency with the reassuring feeling that none of the tools has been left in a place that could, at some point in the future, become a safety risk.

By applying our standardised analysis and optimisation processes, we can specify, develop and manufacture the tools you need and combine them, if you so wish, with products made by other well-known manufacturers to create an individual, comprehensive solution in which no tool is superfluous, no storage space wasted and there is no unnecessary weight to be transported.

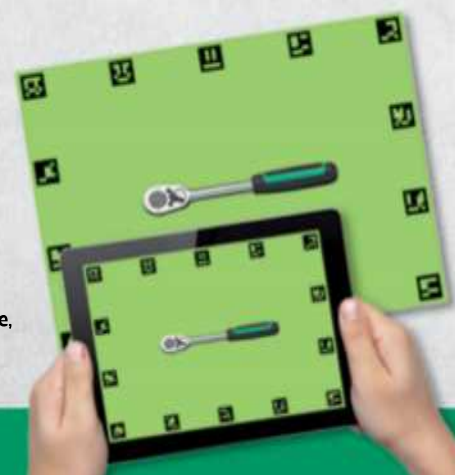

Together with our application consultant, you can use the STAHLWILLE TCS Configurator during the consultancy meeting to generate a virtual view of your choice of tools within the shortest period.

And if you do not find what you are looking for in our Configurator, we can scan your product on-site to enable you to order accurate, bespoke TCS inlays. By combining your tools with matching storage facilities – whether it is the new, highly mobile Tool Trolley made of high-grade plastic through to the iF Product Design Award winning premium Tool Trolley – you benefit in several ways: you profit from optimised protection for your tools to prevent damage, incorrect storage and loss. Applying this high standard of work process organisation offers you noticeably improved process quality with a corresponding contribution to increased productivity within your company.

And what happens if your processes change? It is a simple matter for us to modify the tool positions and the tool compilation to take account of your changing requirements. And to make sure that not a single detail is overlooked in the process, we apply our guaranteed standardised steps for continual improvement.

Our application consultant will scan your specific products on-site to produce accurate, individual bespoke solutions.

1

Efficient inventory compilation with no obligation to buy

- By experienced sales staff
- Jointly with you
- Personally on-site

2

We create a tooling solution

- We select the required tools
- We take your individual special-case solutions into account
- We define the TCS design and storage concept

3

Delivery & support

- Delivery to schedule
- Comprehensive documentation
- Advice and after-sales service

Continuous improvement
